

SYRIAN CRISIS

FORCED DISPLACEMENT FROM THE EASTERN GHOTA AND QALMUN

FLASH REPORT

ISSUE 03
MAY 2018

SYRIAN CRISIS

Forced Displacement from the Eastern Ghota and Qalmun Rural Damascus Governorate

Overview:

Syrian regime and pro-forces kept following “Leave or Die” strategy in the Eastern Ghota and Qalmun in Rural Damascus, using every type of weapons to force Armed Opposition Groups (AOGs) to accept any agreement Russia puts on the table on behalf of Syrian regime with zero tolerance from both of them to any conditions to be imposed by AOGs. Consequently, so-called agreements brokered by Russia with Ahrar al-Sham, Faylaq al-Rahman and Jaysh al-Islam to transfer civilians and AOGs fighters to Idleb, Hama and Aleppo governorates, the Information Management Unit (IMU) of the Assistance Coordination Unit (ACU), through its network of field enumerators, worked on tracking the cross-line displacement from Eastern Ghota and Qalmun in Rural Damascus in the locations where they settled in north-western Syria and northern Aleppo countryside after they passed zero points at Madiq Castle in As-Suqaylabiyah District in Hama governorate and Al-Bab city in Al-Bab district in Aleppo governorate. IMU enumerators collected the data, and 1st version of this report “*Forced Displacement from the Eastern Ghota*”¹ was issued, covering the period from 14 to 28 March. Moreover, IMU enumerators kept tracking the movements of the IDPs in their large concentrations in north-western Syria and northern Aleppo countryside where the 2nd version of “*Forced Displacement from the Eastern Ghota*”² was issued, updating the information up to 10 April 2018. The current flash report was intended to further track the forcibly displaced people from Al-Qadam neighborhood, Harasta, Arbin, Duma, Dhameer and eastern Qalmun. Some of these forcibly displaced people were reported to be subject to multiple displacements due to the lack of services, looking for better conditions or alike. In this report, IMU enumerators revisited the communities that were covered in the 1st and 2nd versions for the third time. They also revisited the ones covered in the 2nd version for the second time. Also, they tracked the forcibly displaced people in new locations for the first time, covering wide geographical areas in Idleb, Hama and Aleppo governorates up to 23 April 2018.

According to field resources more than 70,000 forcibly displaced people were reported to be displaced from the Eastern Ghota and Qalmun in Rural Damascus and passed zero points at Madiq Castle and Al-Bab city, where IMU enumerators were able to track 75,339 ones at their current destinations in north-western Syria and northern Aleppo countryside in comparison with 67,000 ones reported by OCHA in their 3rd situation report “*Situation in North-western Syria*”³ who have already passed zero points up to 19 April. Meanwhile, CCCM shared a map and table of cross-line displacement from eastern Ghota up to 17 April 2018, highlighting that 65,202 forcibly displaced people were reported to be tracked after they passed zero points between 13 March and 17 April; 12,860 of them are reported arrivals in CCCM Reception Centers Mezanaz, Maaret Elekhwani in Idleb governorate, Al-Bab and Azaz in Aleppo governorate. It is noteworthy that inter-factional fight that took place recently along with the ongoing bombardment by Syrian regime forced some new arrivals from Eastern Ghota and Qalmun in Rural Damascus to be re-displaced to some areas in Afrin District which are considered safer in terms of security in comparison with other areas.

The increase in the number of the forcedly displaced people tracked by IMU enumerators can be attributed to the fact that some of them were reported by one Local Council (LC) who didn't realize that they were displaced to another location to be reported by the LC of that location, challenging IMU enumerators who were forced to revisit the LCs more than once to triangulate the information they had already collected; yet the situation was not perfectly manageable as reported by most of the LCs visited.

Methodology:

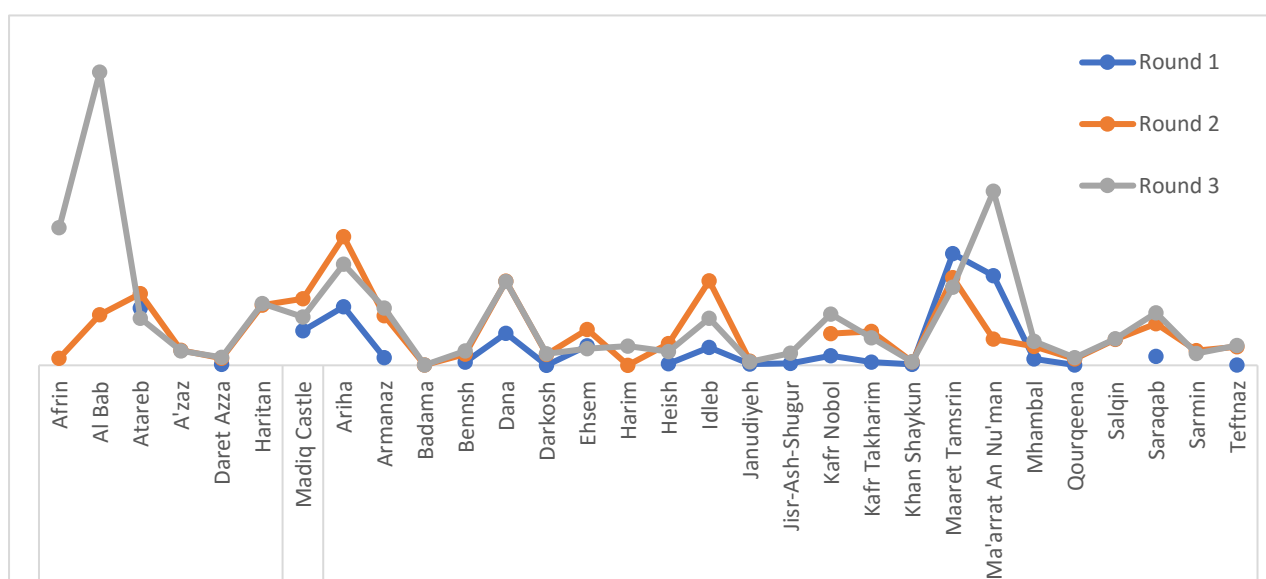

Face to face interviews were conducted with Key Informants (KIs) to collect the data including community leaders, Local Council members, Civil Society members, NGOs or members of registration points of both IDPs and host community. IMU mobilized 50 enumerators to interview one sample at each community using Excel Form. Then, the data was analyzed to generate the figures, and the maps were produced to be included in the report. Meanwhile, CCCM and OCHA reports were used as secondary data for triangulation along with some field reports that can be considered "informed sources".

In this report, IMU enumerators revisited the communities that were covered in the 1st and 2nd versions for the third time. They also revisited the ones covered in the 2nd version for the second time. Also, they tracked the forcedly displaced people in new locations for the first time.

Demographics of IDPs:

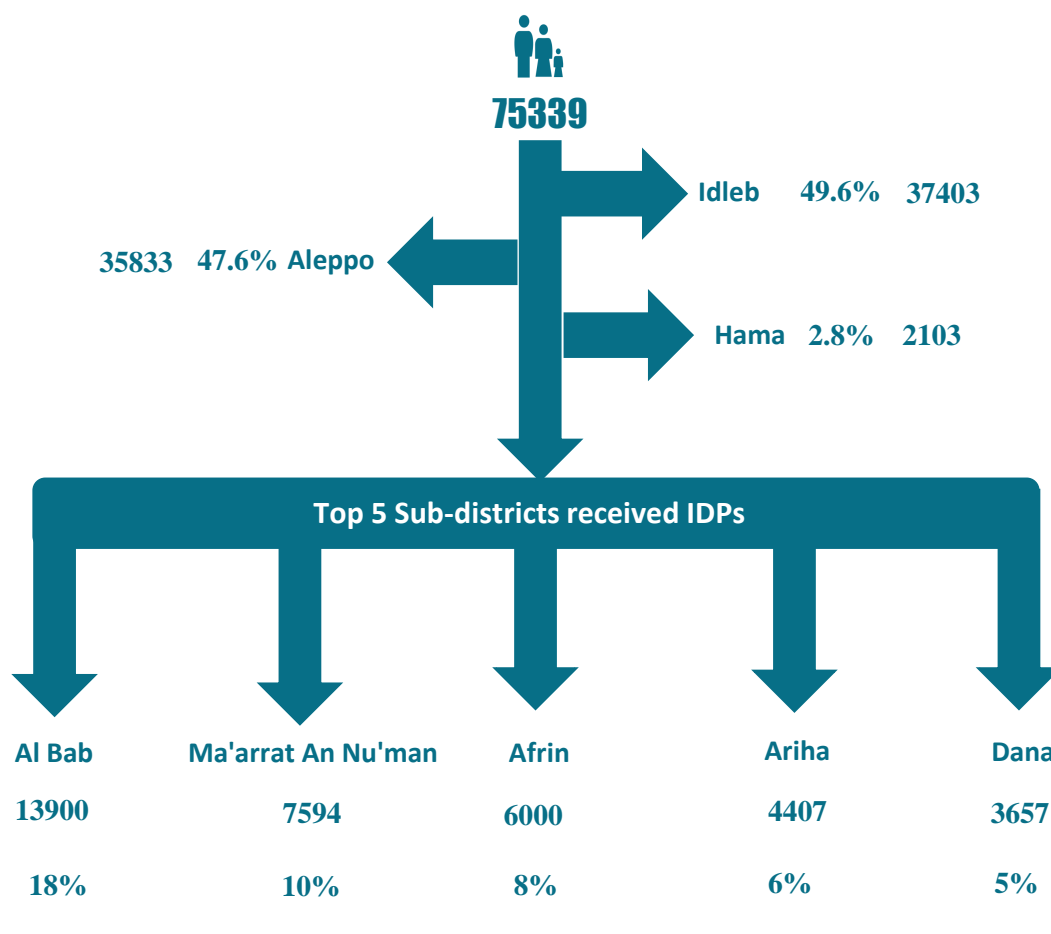

658 communities in 40 sub-districts in Idleb, Aleppo and Hama governorates were covered by IMU enumerators. It was found out that the forcedly displaced people from the Eastern Ghota and Qalmun had arrived at 175 communities, whereas 483 ones hadn't hosted any forcedly displaced people. 56 communities in 20 sub-districts were revisited for the third time, hosting 21,276 forcedly displaced people. Meanwhile, IMU enumerators visited 21 communities for the first time in Jarablus, Afrin, Al-Bab and A'zaz sub-districts in Aleppo governorate, hosting 11,315 ones. On the other hand, 2,546 forcedly displaced people were reported to leave 9 communities – Sheikh El-Hadid, Koran Jandris, Kafr Naseh Elatareb, Kafr Naha, Jeineh, Abzemo and Batbu in Aleppo governorate along with Al-Faroukiyeh and Sarja in Idleb governorate – and that might be attributed to the lack of services.

Figure 1: Comparison between the revisited communities in the 1st, 2nd and 3rd issues of this report.

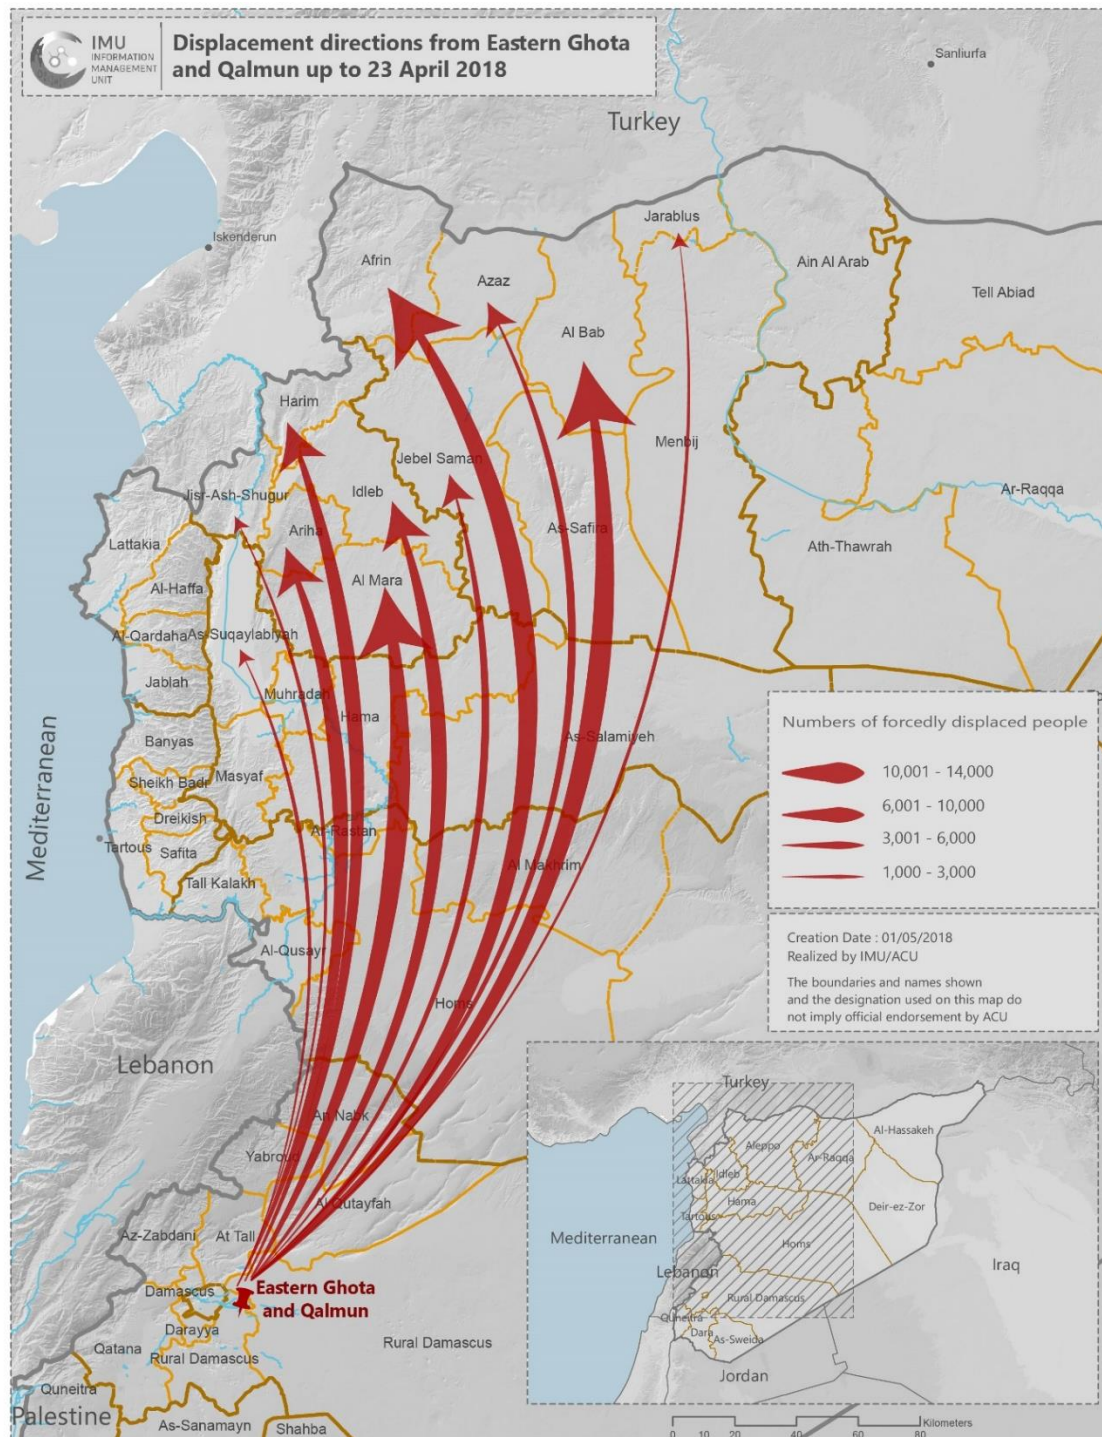

In total, IMU enumerators tracked the IDPs in 175 communities in 40 sub-districts. Up to 23 April 2018, 73,339 forcibly displaced people were reported by IMU enumerators to arrive at their current destinations in 3 governorates – Idleb by 49.6% (37,403 IDPs), Aleppo by 47.6% (35,833 IDPs) and Hama by 2.8% (2,103 IDPs). The top 5 sub-districts receiving IDPs were Al-Bab sub-district by 18% (13,900 IDPs), Ma'arrat An Nu'man sub-district by 10% (7,594 IDPs), Afrin sub-district by 8% (6,000 IDPs), Ariha sub-district by 6% (4,407 IDPs) and Dana sub-district by 5% (3,657 IDPs) of the total number of IDPs.

Figure 2: The forcibly displaced people segregated by locations

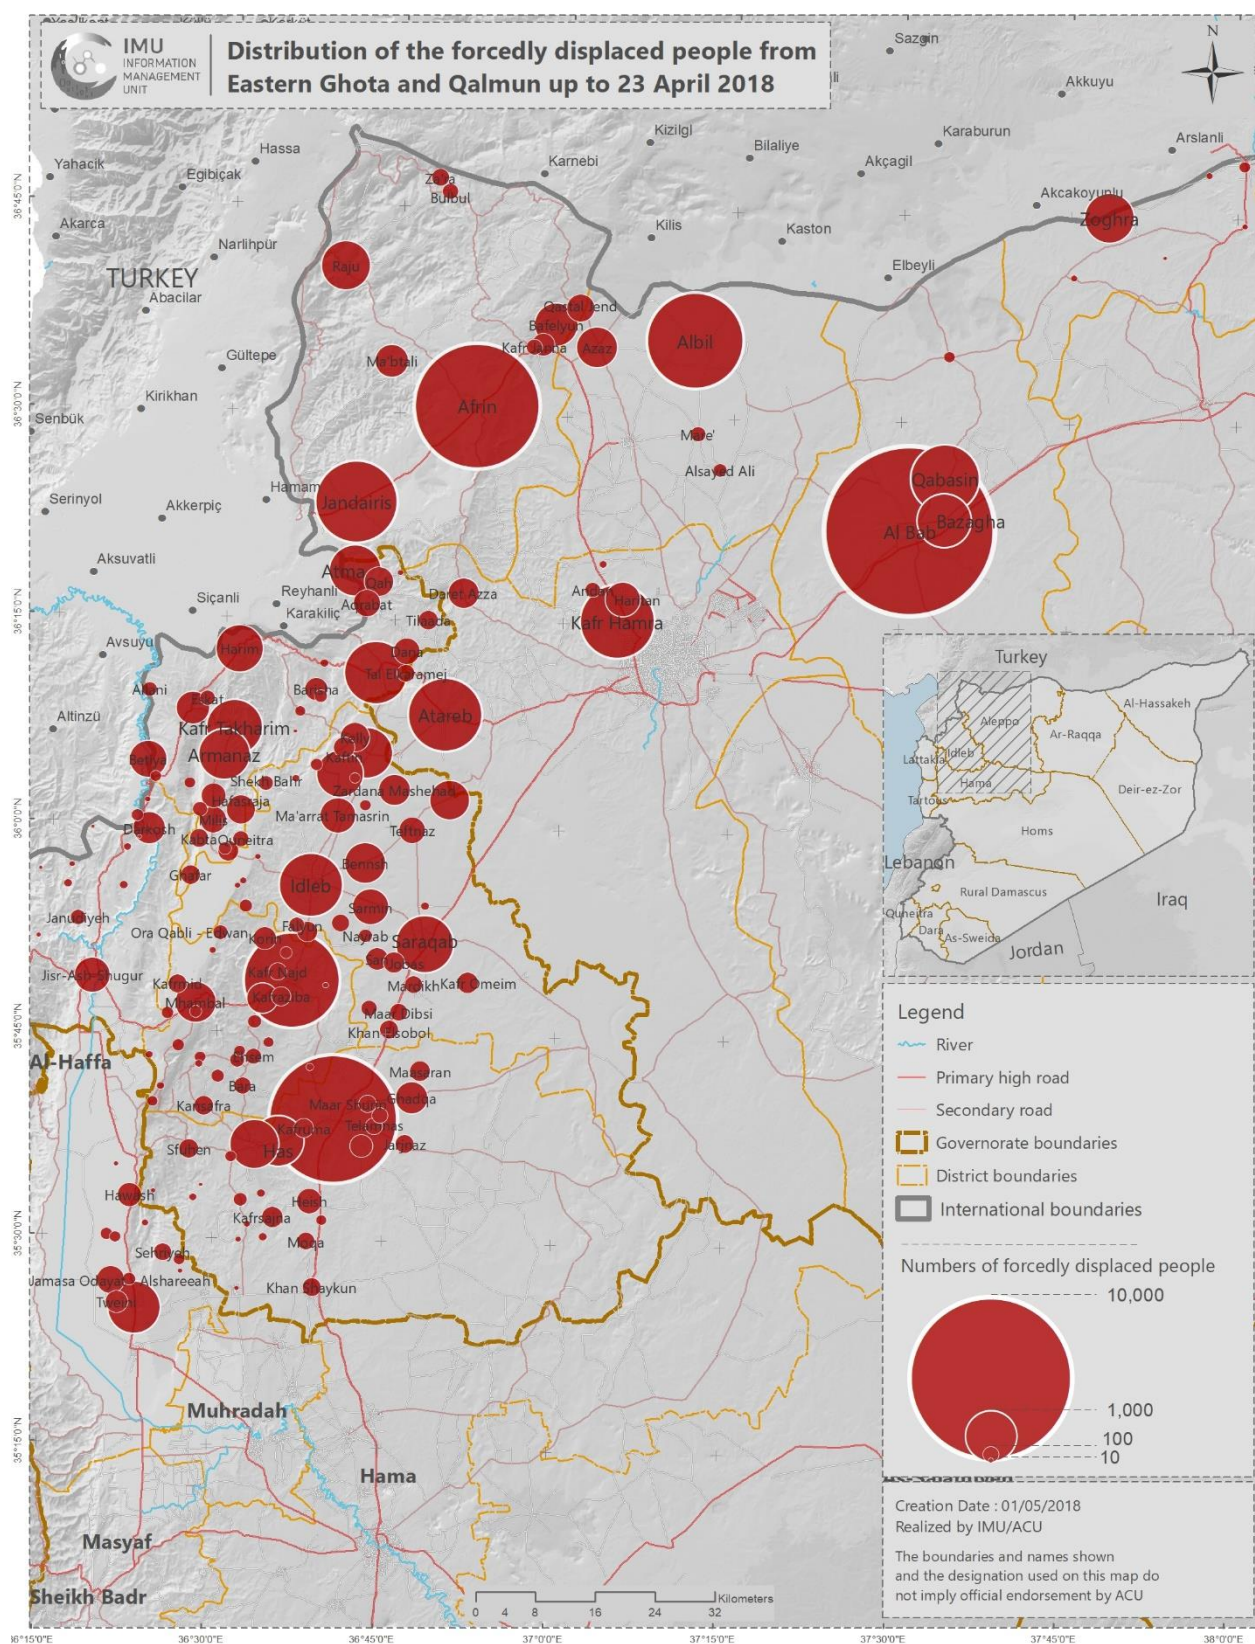

Map1: Forced Displacement Directions from Eastern Ghota and Qalmun

The first convoys reported in the 1st issue of this report headed to Idleb, Northern Hama countryside and Western Aleppo countryside. New locations were added to the list of the destinations of the IDPs from Eastern Ghota in the 2nd issue of this report to include A`zaz and Al-Bab in Northern Aleppo countryside along with Afrin. The current issue, as it was expected, showed that Al-Bab sub-district was the first sub-district in hosting the forcedly displaced people because it was the main destination included in the evacuation agreements that took place lately and Afrin was the third sub-district because it was the preferred destination of the IDPs for security related issues and it is well-served in comparison with other destinations.

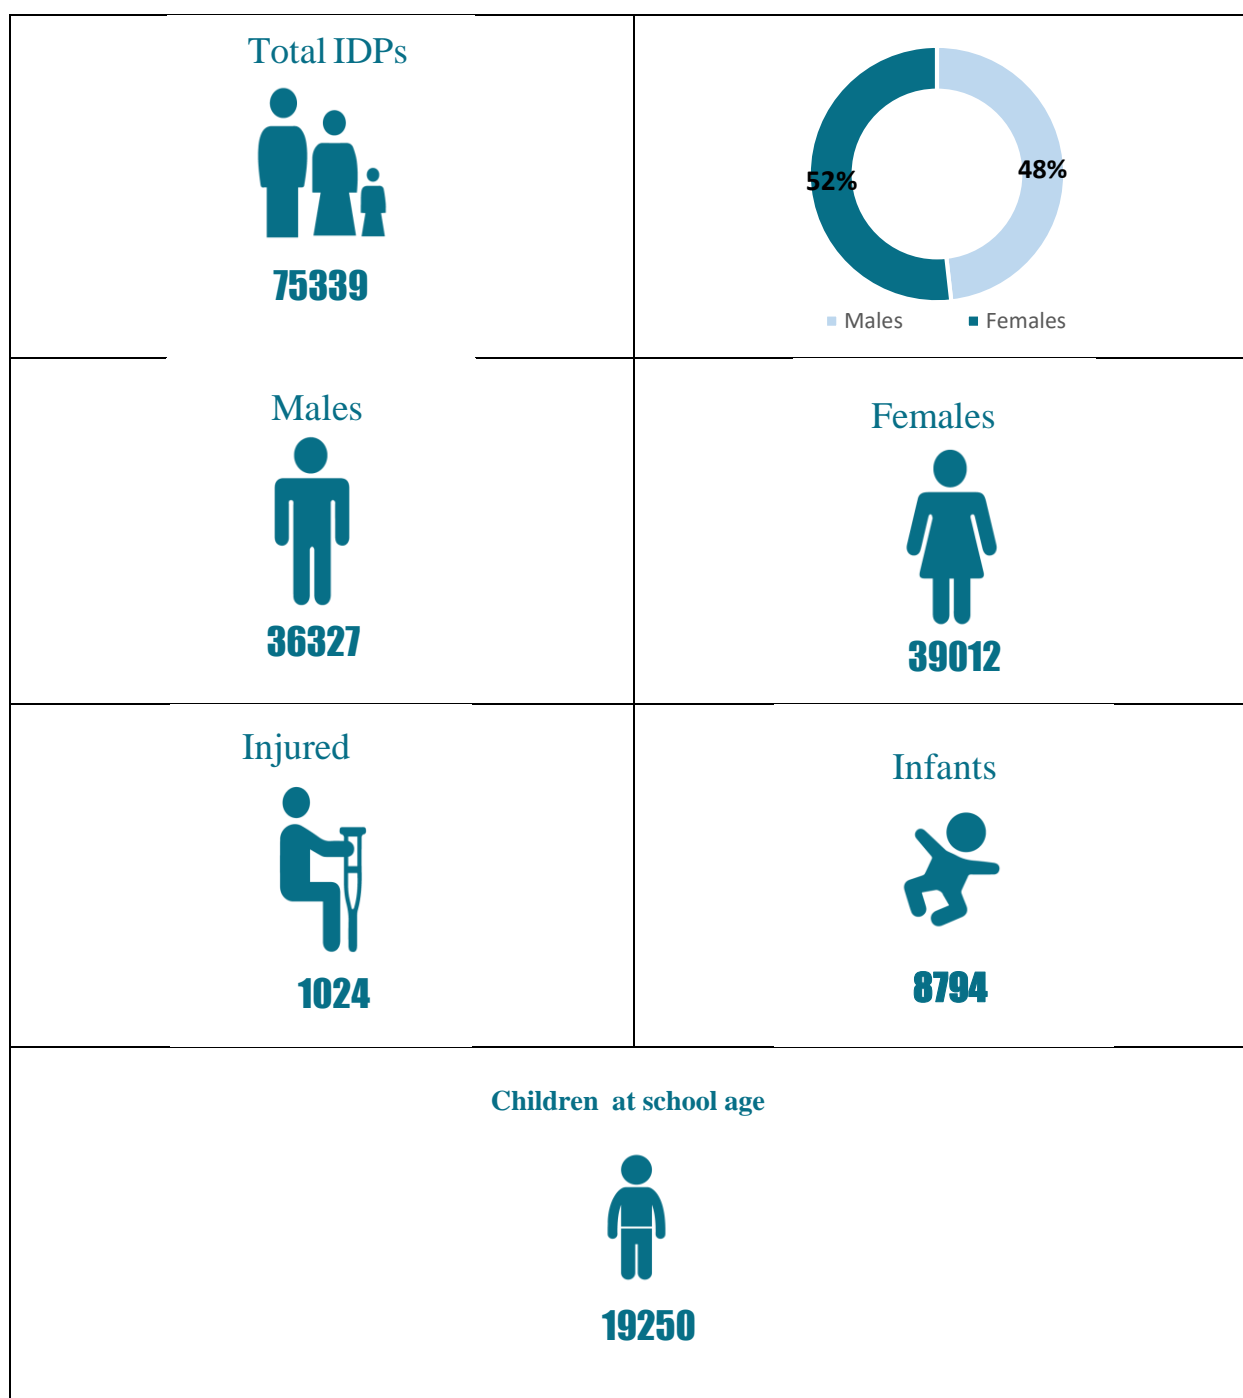

Map 2: Distribution Locations of the forcibly displaced people

Forcedly displaced people segregated by gender and special cases:

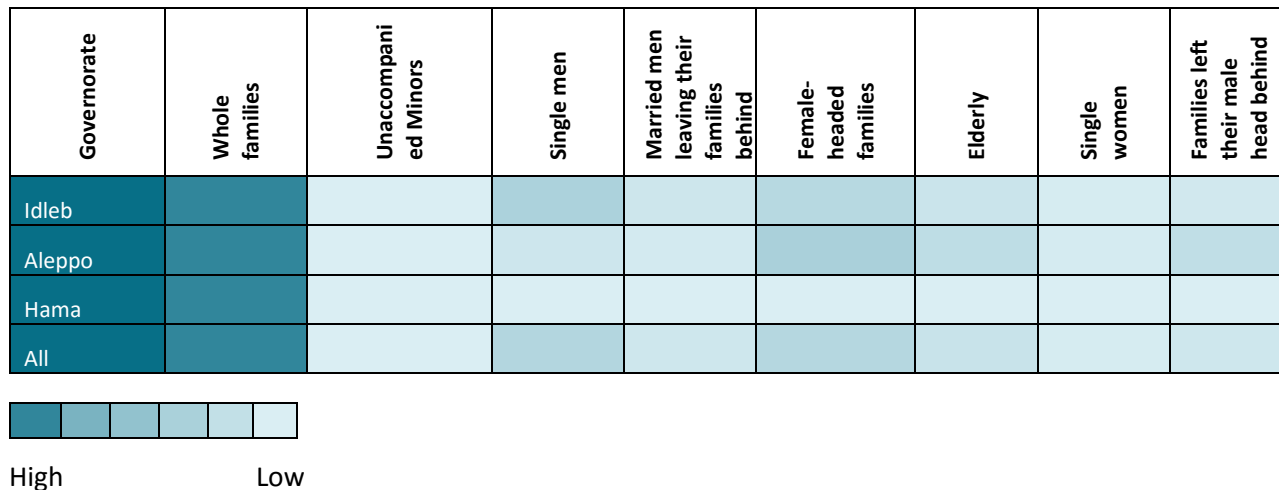

IMU enumerators tracked the forcedly displaced people and collected the information segregated by gender and special cases. It was found out that 48% (36,327 IDPs) of the total number are males in comparison with 52% (39,012 IDPs) are females including 8,794 infants who suffered from malnutrition because of the siege and their special needs like health care and hygiene-related ones should be covered. The convoys also included 19,250 children at school age and 1,024 injured who need immediate medical interventions.

Figure 3: Categories of IDPs.

The majority of the families arrived was whole families (husband, wife and children). Meanwhile, single men and female-headed families were also frequently noticed types of the forcibly displaced people, and the last criterion should be included in the different projects.

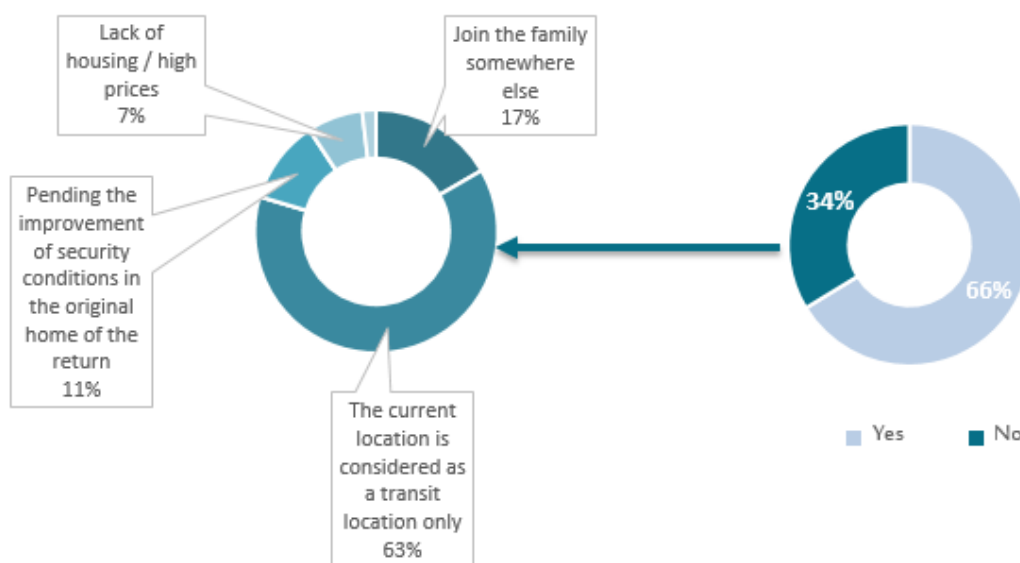

Figure 4: Classification of forcibly displaced people.

IDPs future plans:

One of the main issues IMU enumerators concentrated on is the future plans of the forcibly displaced people whether they are going to stay where they are, or they have pre-made intentions to leave for a variety of reasons. It was found out that 66% of the IDPs have no intentions to leave their current locations in comparison with 34% who showed willingness to be re-displaced because some of them consider their current locations as transit by 63%, 17% of them wish to be reunified with their families, 11% waiting for the security situation to improve to return and the lack of housing and high prices force 7% of them to think of being re-displaced.

Figure 5: IDPs' intentions to stay in their current locations

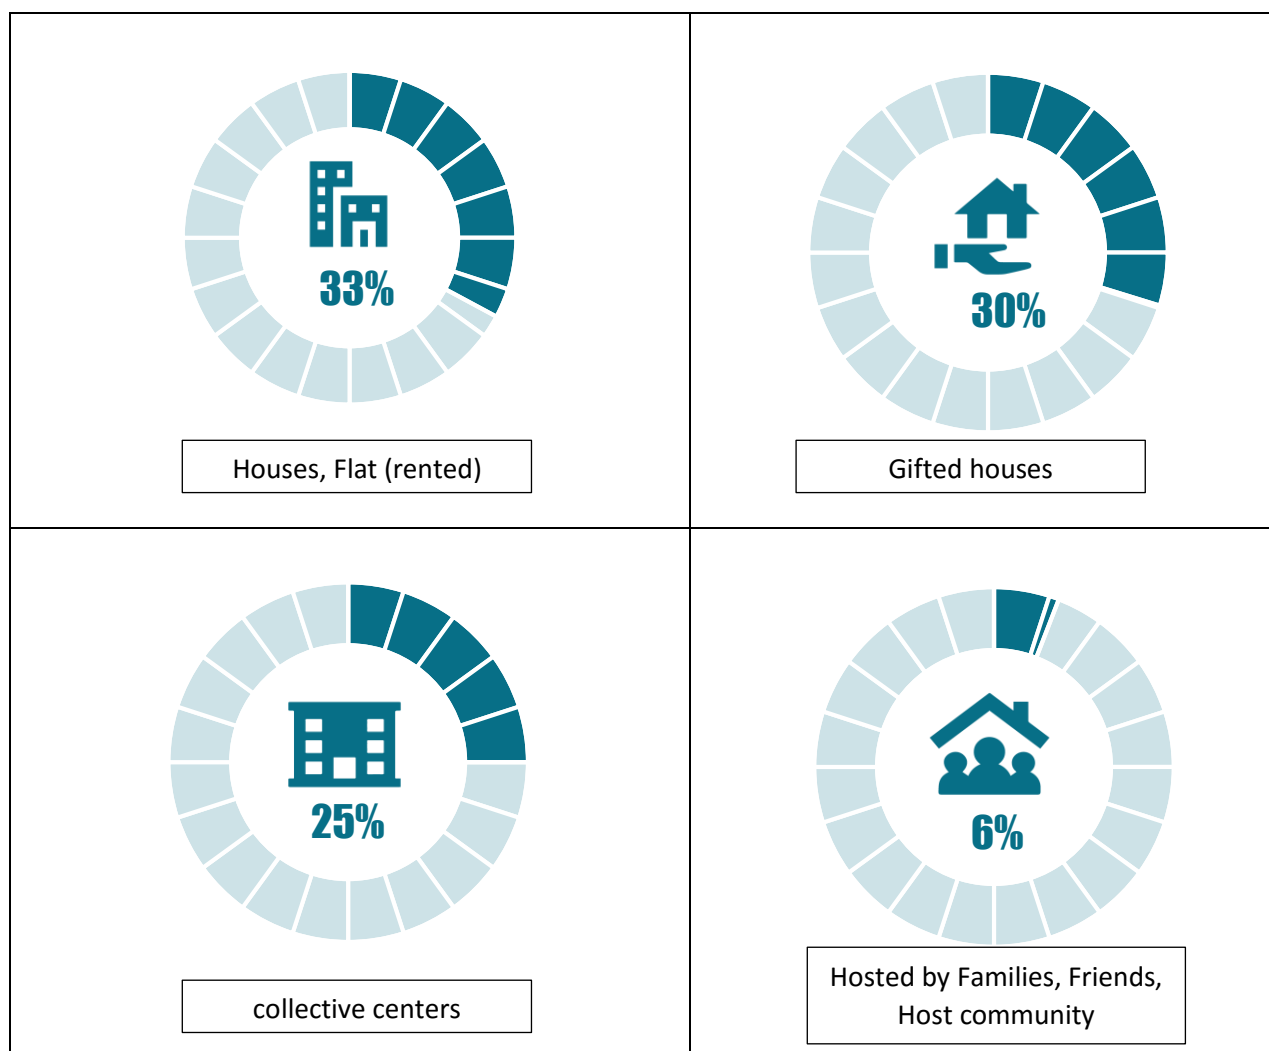

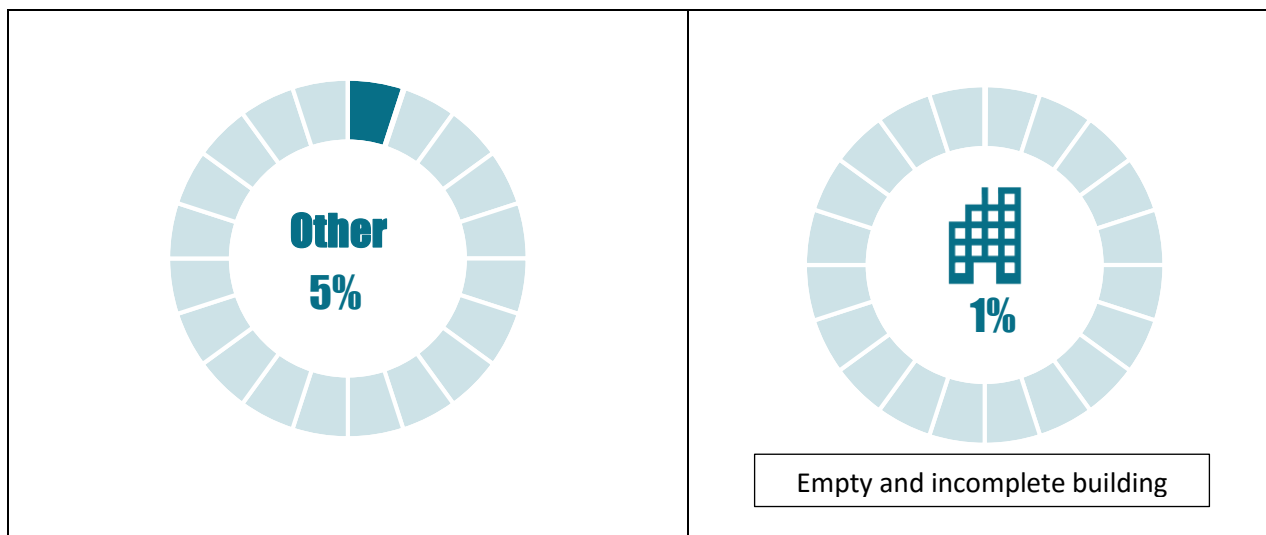

Shelters of IDPs:

33% of the IDPs are settled in rented houses and flats, 30% of them found shelter in right-to-use houses, 25% are in collective centers, 6% are hosted by other families, 5% are settled in other types of shelter including mosques and tents in the schoolyards, and 1% found shelter in empty or incomplete buildings. In this regard, some of the forcibly displaced people were reported to leave the mud village as they didn't manage living there.

In comparison with the 2nd issue of this report, there is an increase in the percentage of the families settled in rented houses and flats due to the fact that there were some campaigns to support some families by rental fees. On the other hand, 30% of the IDPs are settled in right-to-use houses where they don't feel stable who might be asked by houses' owners to leave for a variety of reasons and they themselves are not happy as they have the feeling that they are burdening the families offering them these houses who might benefit from their rental fees.

Figure 6: IDPs per shelter

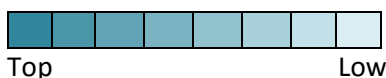

Priorities of the IDPs in terms of needs:

Through three issues of this report, cash assistance came first on the list of priorities of the IDPs. Meanwhile, it was found out in this report that the distribution of food baskets and kitchen sets along with houseware was also of the priorities of the IDPs.

Figure 7: Priorities of the IDPs in terms of needs

Governorate	Medicine	Kitchen set	Bread	Healthcare	Food basket	Dignity kit	Blankets/ Mattresses	House ware	Cash	Drinking water	Cooking Fuel	Solar powered lighting	Clothes	Hygiene kit	Tent
Idleb															
Aleppo															
Hama															
All															

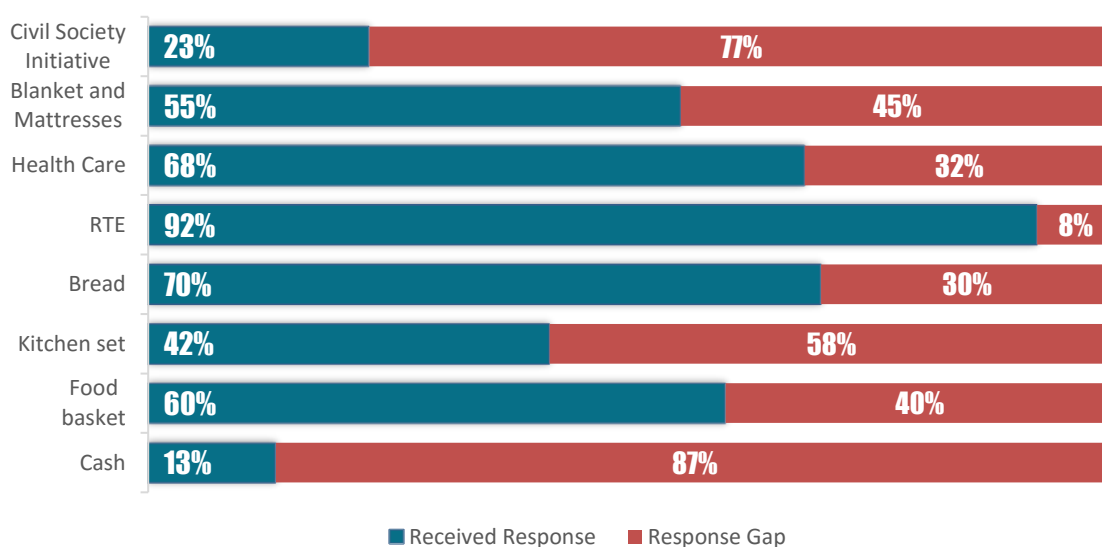

Response Analysis:

Out of 75,339 IDPs, only 70% were supported by bread. 55% of them were supported by blankets and mattresses IMU enumerators reported that some active agencies are distributing only one mattress per one family which is not enough and when they reach out for other agencies to ask for more mattresses, they are not supported because the other agencies would consider this as a kind of duplication. 68% of the IDPs received health care, but patients with chronic diseases and injuries are in need of additional health care and should be targeted with periodic medications. 92% of them were supported by Ready To Eat rations (RTEs), 60% were supported by food baskets, 42% received kitchen kits, and only 13% of the total number were supported by cash grants which are still considered the most urgent and needed gap to be filled because these grants would save the IDPs dignity to meet their needs mainly shelter.

In comparison with 2nd issue of this report, it was reported that the capacity of the active agencies to respond started to decrease because it was expected that more displaced people would arrive. So, there is a real concern that the new arrivals would need to follow some negative mechanisms to cope with the lack of support and services or they might be forced to head to the Syrian-Turkish border to cross illegally to Turkey and that would endanger their lives. Moreover, 23% of the different needs of the displaced populations, mainly houseware, were covered by civil society initiatives. Furthermore, most of the Local Councils visited by IMU enumerators reported the lack of resources to cover the needs of the increased numbers of IDPs. Simultaneously, despite flagging the issue previously, it was still reported that active agencies are focusing their response at zero points only.

Figure 8: Provided Response and Response Gap

Recommendations:

The populations expressed some feeling of resentment because some agencies are conducting Rapid Needs Assessment (RNAs) and giving promises of providing support. However, no response took place up to the period of writing this report. So, it is recommended to be careful when conducting RNAs in order not to raise the expectation of the populations.

It is recommended to increase the number of the specialists in skin diseases and their related medications because it was reported as a gap and an urgent need as well. Furthermore, mobile clinics should be accessible to IDPs because it was found out that some of them are travelling long distances to access the nearest ones.

All the communities should be dealt equally regarding services and support. However, it was reported that some agencies are focusing on large concentrations of IDPs but not the small ones, forcing the IDPs in the latter to be re-displaced looking for better-served communities.

There is a need that the active agencies should make plans to include the forcibly displaced people in long-term projects rather than the emergency ones given the fact that the majority of them don't have any intentions to leave their current locations and that would, consequently, mitigate exposing them to the phenomenon of multi-displacement.

More efforts should be made to support the forcedly displaced people with psycho-social support (PSS) mainly women which was reported as a gap that should be addressed.

Some efforts should be made to support the families that lost their documentation and are unable to access services because of this through close coordination between the LCs, the active agencies and some committee formed in this regard.

The reported convoys included 19,250 children at school age. Therefore, long-term plans should be made in order to integrate them into schools as soon as possible because 66% of the forcedly displaced people stated that they have no intentions to leave their current locations.

ACU reiterates calling the international community and all working organizations to search for a strategic solution to secure a permanent shelter for the forcedly displaced people from the Eastern Ghota and Qalmun, in addition to providing the suitable health care, psychological support, and supporting them with urgent cash grants to acquire the basic needs for the displaced households.
